Sorting Algorithms

TUESDAY

JANUARY 2020

J	1	2	3	4	5	6	7	8	9	10	11	12
A	13	14	15	16	17	18	19	20	21	22	23	24
N	25	26	27	28	29	30	31					

* Criteria for analysis :

- 1) Number of comparison
(by which the time complexity is given)
- 2) Number of swaps
- 3) Adaptive
- 4) Extra memory

* Stable :

→ if a sorting algorithm is preserving the order of a duplicate element in a sorted list then it is called a stable algorithm.

Before :

Name : A B C D E F G

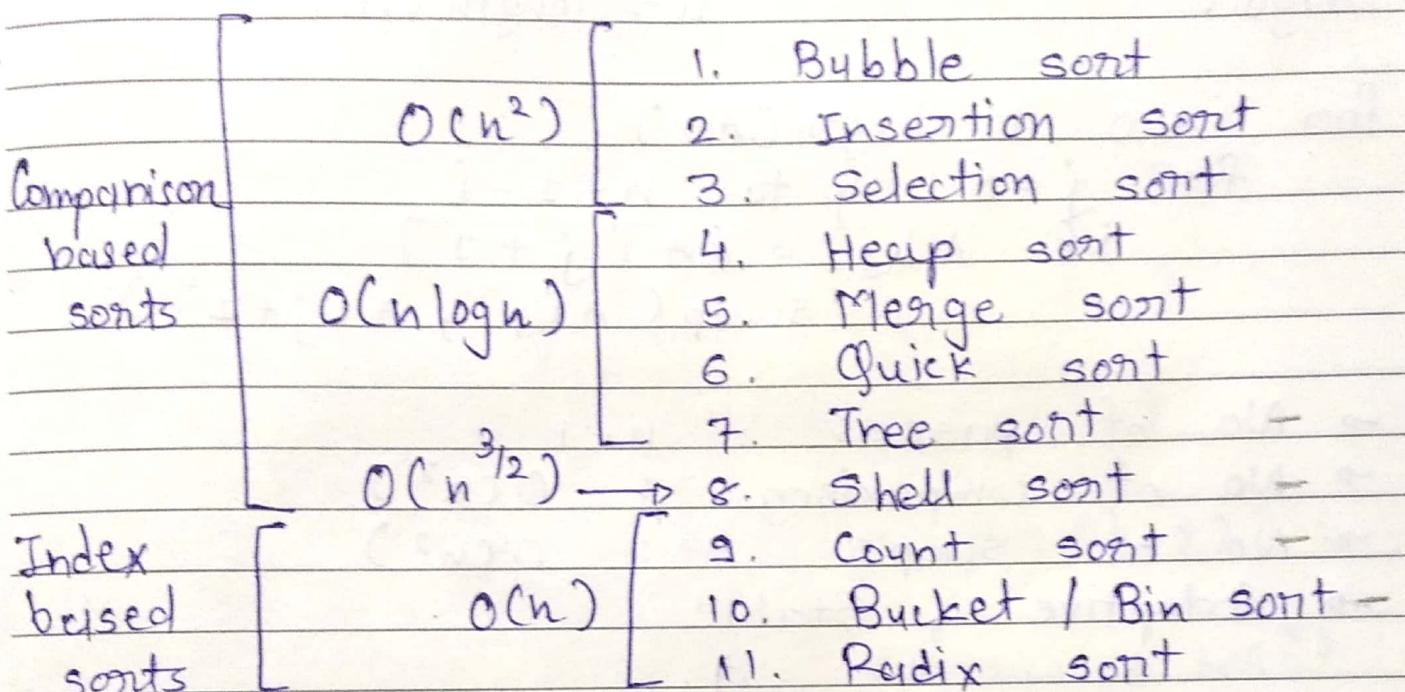

Marks : 5 8 6 4 6 7 10

After :

Name : D A C E F B G

Marks : 4 5 6 6 7 8 10

* Sorting techniques :

* Comparison b/w bubble sort and insertion sort :

Bubble sort Insertion sort

min comp.	$O(n)$	$O(n)$	ASC
max comp	$O(n^2)$	$O(n^2)$	DSC
min swaps	$O(1)$	$O(n)$	ASC
max swaps	$O(n^2)$	$O(n^2)$	DSC
Adaptive	✓	✓	
stable	✓	✓	
Linked list	No	Yes	
K passes	Yes	No	

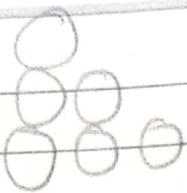

16

THURSDAY

JANUARY 2020

J	1	2	3	4	5	6	7	8	9	10	11	12
A	13	14	15	16	17	18	19	20	21	22	23	24
N	25	26	27	28	29	30	31					

1. Bubble sort

$$n = \text{length}[\text{Arr}]$$

→ Algo :

```

for i = 0 to length[Arr]
    for j = 0 up to n - 1 - i
        if A[j] > A[j + 1]
            swap(A[j], A[j + 1])
    
```

→ No. of passes : $n - 1$ → No. of comparison : $O(n^2)$ → No. of swaps : $O(n^2)$

→ Adaptive, Stable

(Not by nature)

→ Time complexity :

min → $O(n)$ (when sorted already)max → $O(n^2)$

→ If the list is already sorted

then it is taking minimum time
so bubble sort is adaptive.

J	1	2	3	4	5	6	7	8	9	10	11	12
A	13	14	15	16	17	18	19	20	21	22	23	24
	25	26	27	28	29	30	31					

N M T W T F S S M T W T F S S

FRIDAY

JANUARY 2020

17

```

void bubbleSort ( int arr[], int n )
{
    for ( int i = 0; i < n; i++ )
    {
        int flag;
        for ( int j = 0; j < n - 1 - i; j++ )
        {
            flag = 0;
            if ( arr[j] > arr[j + 1] )
            {
                swap ( arr[j], arr[j + 1] );
                flag = 1;
            }
            if ( flag == 0 ) // this will execute
                break; // when list is already
                // sorted.
        }
    }
}

```

→ it is not adaptive in nature, we make it by adding if (flag == 0) condition.

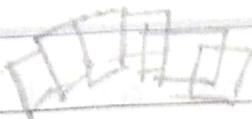

18

SATURDAY

JANUARY 2020

WEDNESDAY

APRIL 2020

01

* Queue :-

* Data :-

- 1) Space for storing elements
- 2) front - for deletion
- 3) rear - for insertion.

* Operations :

- 1) enqueue (data)
- 2) dequeue ()
- 3) isEmpty()
- 4) isFull()
- 5) first()
- 6) last()

* Queue using Array :

→ Using single pointer rear :-

Insert : $O(1)$
Delete : $O(n)$

2020

02

THURSDAY

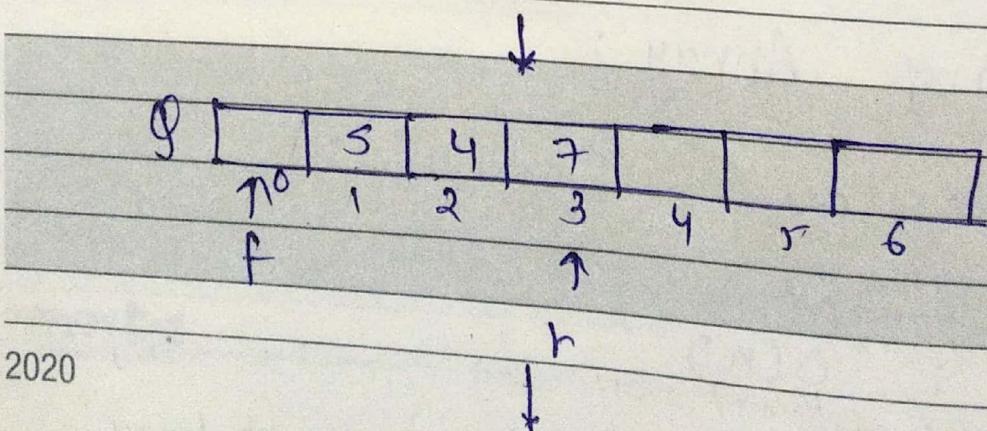

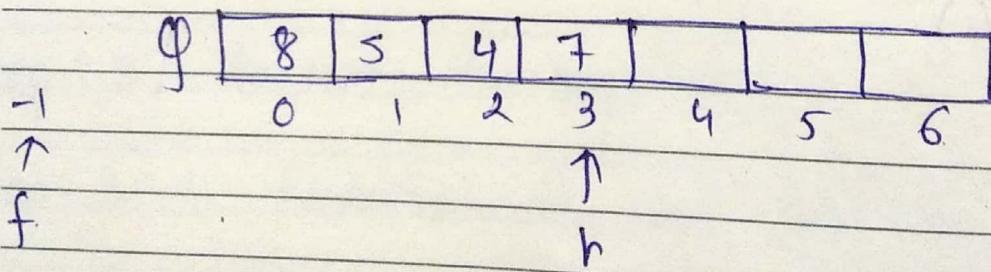

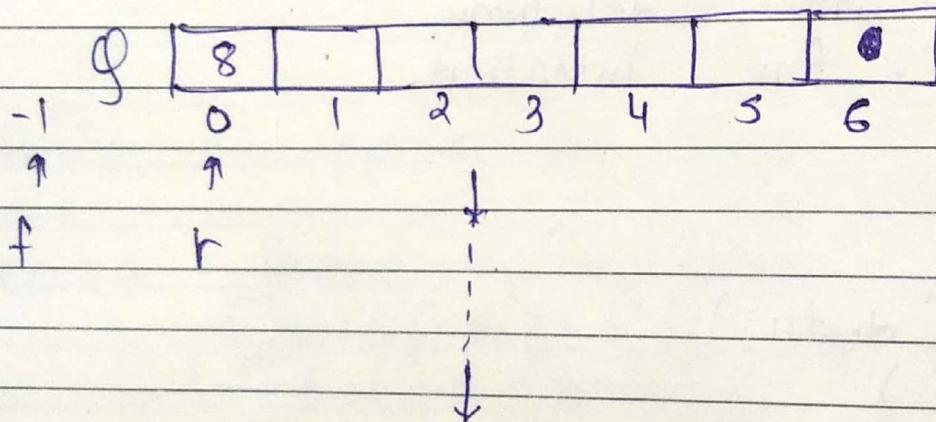

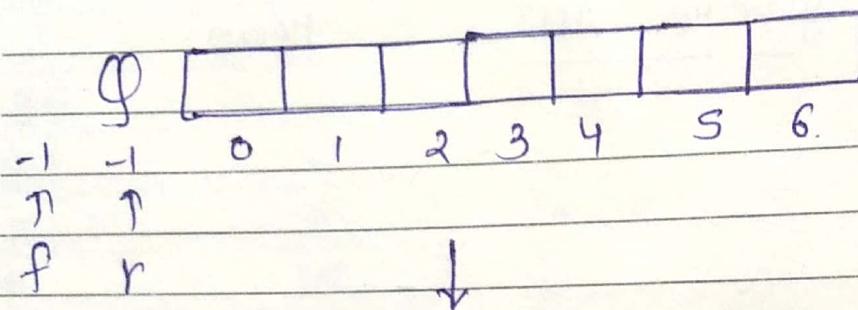

APRIL 2020

A	6	7	8	9	10	11	12	13	14	15	16	17	18
P	20	21	22	23	24	25	26	27	28	29	30		
R	M	T	W	T	F	S	S	M	T	W	T	F	S

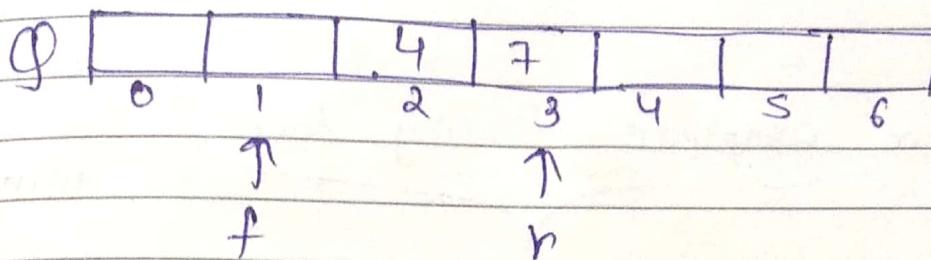

→ Using two pointers front and rear :-

Insert : O(1)

Delete : O(1) (\because moving the counter using front)

2020

- While deleting from the front, we don't need to shift all the remaining elements. We just need to shift the front pointer before the queue's first element.
- Therefore time complexity is O(1) for deletion.

* Initially : front = rear = -1

isEmpty : if (front > rear) || front == -1)

isFull : if (rear == size - 1)

04

SATURDAY

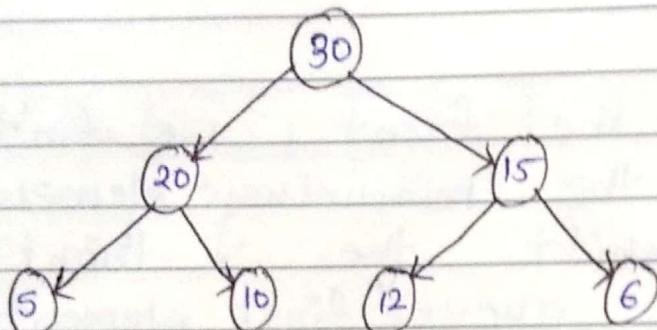

APRIL 2020

A	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19

R	M	T	W	T	F	S	S	M	T	W	T	F	S						

* Heap :-

→ Heap is a complete Binary Tree.

Having
max heap
on
min heap
pattern.

when we store it's element
then there should not be
any empty space.

T	30	20	15	5	10	12	6
	1	2	3	4	5	6	7

if $i = 0, 1, 2, \dots$

then
left child

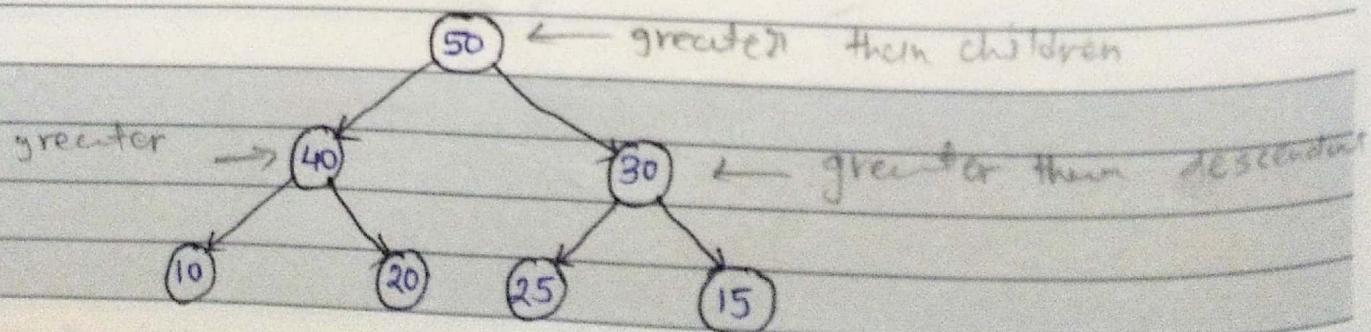

→ Node at index i

Left child at $2^* i$ & right child
Right child at $2^* i + 1$

→ Every node should have an element greater
than or equal to all its descendants.
then it is called MAX HEAP.

(Duplicates are allowed.)

05 SUNDAY

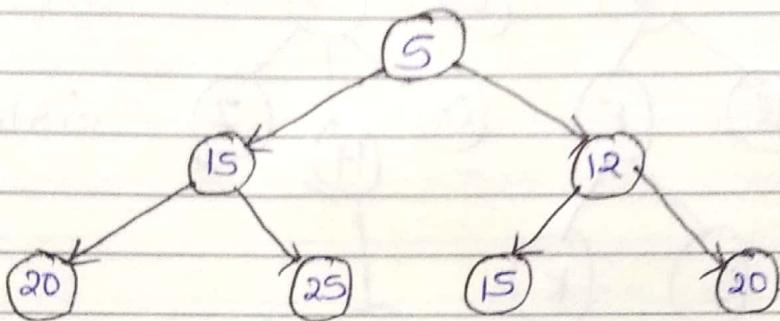

→ $O(n \cdot \log n)$ time is taken for creating an entire heap.

A	1	2	3	4	5
P	6	7	8	9	10 11 12 13 14 15 16 17 18 19
R	20	21	22	23	24 25 26 27 28 29 30

MONDAY
APRIL 2020

06

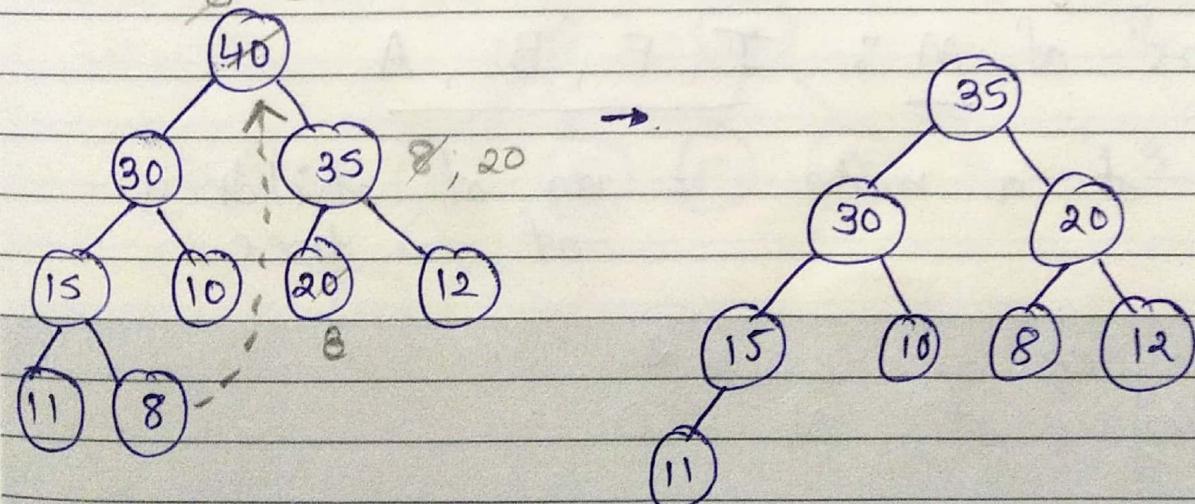

→ If every node has an element lesser than or equal to all its descendants then it is called MIN HEAP.
(Duplicates are allowed.)

→ Height of a complete binary tree is $\log n$.
Therefore the height of a heap is $\log n$.

→ delete_max() :

8.35

$O(\log n)$ for deleting & inserting

0	1	2	3	4	5 6

blank spaces are there in between

the ordinary elements.

∴ it is NOT a complete binary tree.

→ A complete binary tree of height 'h' will be a full binary tree up to ' $h-1$ ' height.

$$\therefore \text{up to } h-1 = 2-1 = 1$$

→ A Full binary tree is always a complete binary tree. but reverse may not be true.

2020

* Tree Traversals *

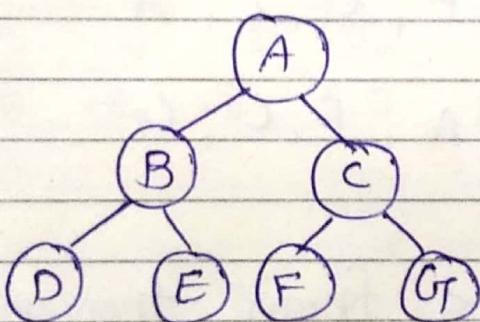

→ Inorder : L V_r R

Preorder : V_r L R

Postorder : L R V_r

Level order : level by level traversing

→ Ex:-

Level order:

A, B, C, D, E, F, G

Inorder : L V_r R

↳ D, B, E, A, F, C, G

Preorder : V_r L R

↳ A, B, D, E, C, F, G.

Postorder : L R V_r

↳ D, E, B, F, G, C, A.

28

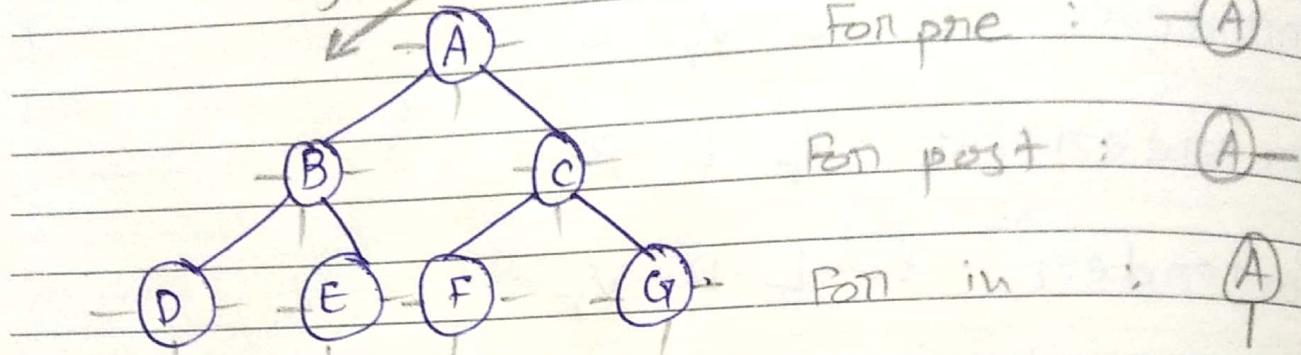

TUESDAY

APRIL 2020

A	6	7	8	9	10	11	12	13	14	15	16	17
P	20	21	22	23	24	25	26	27	28	29	30	
R	M	T	W	T	F	S	S	M	T	W	T	

* Easy methods

~~subtrees from~~

For pre : - (A)

For post : (A) -

For in : (A)

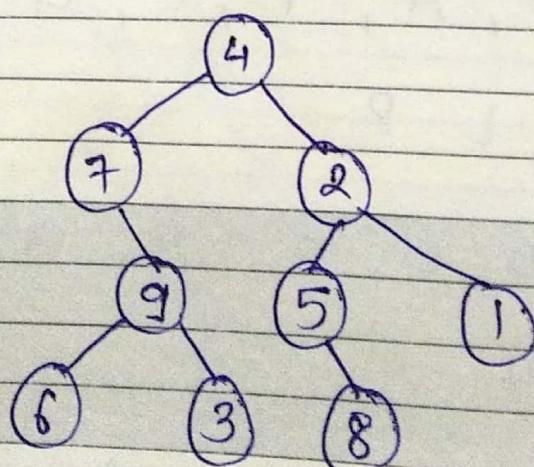

: pre : A, B, D, E, C, F, G

: post : D, E, B, F, G, C, A

: In : D, B, E, A, F, C, G

* Generating trees from traversals :-

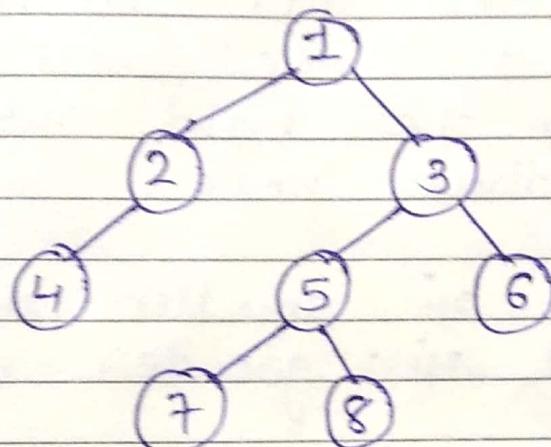

1) Pre : 4, 7, 9, 6, 3, 2, 5, 8, 1
 In : 7, 6, 9, 3, 4, 5, 8, 2, 1

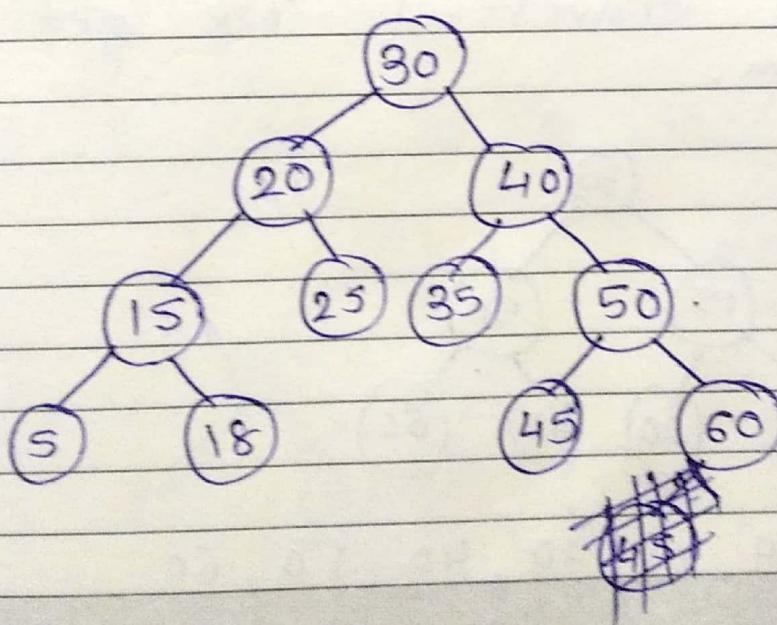

2020

A	6	7	8	9	10	11	12	13	14	15	16	17	18	19

R	M	T	W	T	F	S	S	M	T	W	T	F	S	S

2) In : 4, 2, 1, |, 7, 5, 8, 3, 6
 pre : 1, 2, 4, 3, 5, 7, 8, 6
 →

3) In : 5, 15, 18, 20, 25, 30 | 35, 40, 45, 50, 60
 post : 5, 18, 15, 25, 20, 35, 45, 60, 50, 40 [30] ←

30

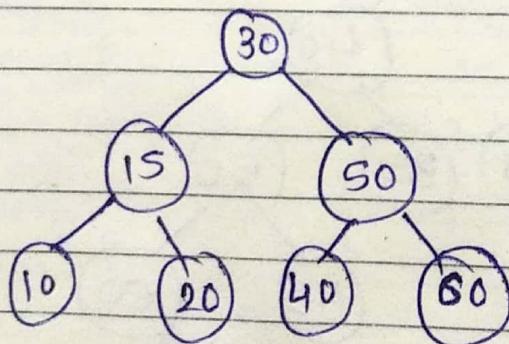

THURSDAY

APRIL 2020

A	6	7	8	9	10	11	12	13	14	15	16	17	18
P	20	21	22	23	24	25	26	27	28	29	30	1	2
R	M	T	W	T	F	S	S	M	T	W	T	F	S

* Binary Search Tree :-

- A binary tree in which, every node, all the elements in the left subtree are smaller than that node and all the elements in the right subtree is greater than that node.
- In short, Left \Rightarrow smaller and Right \Rightarrow greater elements and NO duplicates are allowed.
- In in-order traversal we get the sorted form.

In order : 10, 15, 20, 30, 40, 50, 60,

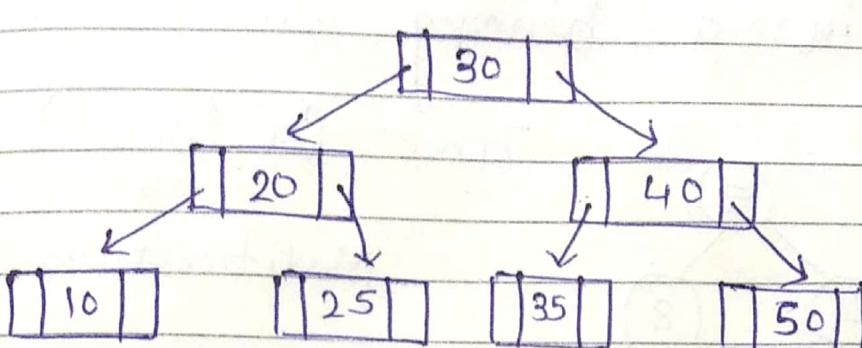

- No. of binary search tree can be generated from given n node with same in-order
- 2020 is : $T(n) = \frac{2^n C_n}{n+1}$

M	1	2	3	4	5	6	7	8	9	10
A	11	12	13	14	15	16	17	18	19	20
Y	21	22	23	24	25	26	27	28	29	30

FRIDAY

MAY 2020

01

h
0

1

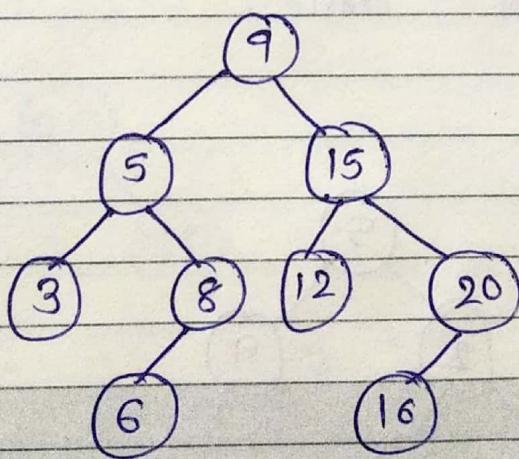

2

→ For searching time complexity is
 $O(h)$ = $O(\log n)$

$$\log n \leq h$$

* Creating Binary Search Tree :-

9, 15, 5, 20, 16, 8, 12, 3, 6.

→ each time start from root

Time : $O(n \cdot \log n)$

02

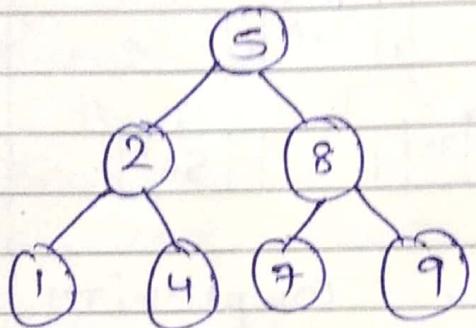

SATURDAY

MAY 2020

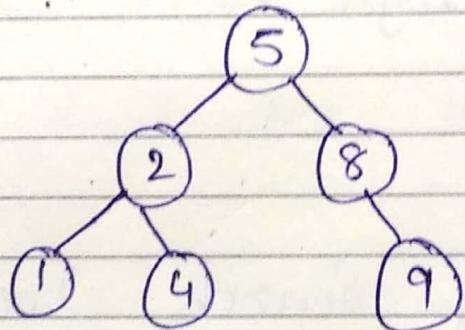

M	1	2	3	4	5	6	7	8	9	10
A	11	12	13	14	15	16	17	18	19	20
Y	21	22	23	24	25	26	27	28	29	30

* Deleting in a binary search tree :-
Time: $O(\log n)$

14

Modifications : $O(\log n)$

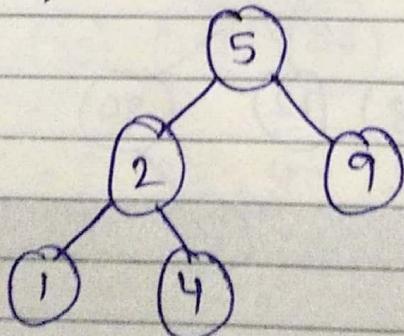

Delete 7 :-

→ when it's a leaf node then just remove it and done.

24 Delete 8 :-

03 SUNDAY

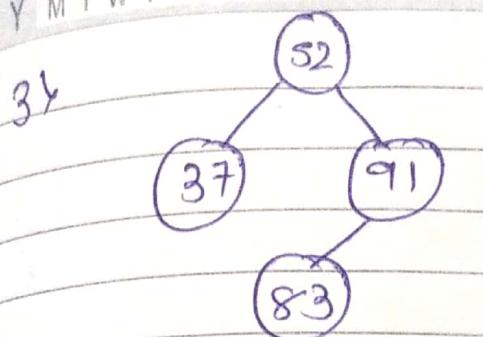

→ if deleted node has only one child then just promote it and done

2020

	1	2	3	4	5	6	7	8	9	10
M	11	12	13	14	15	16	17	18	19	20
A	21	22	23	24	25	26	27	28	29	30

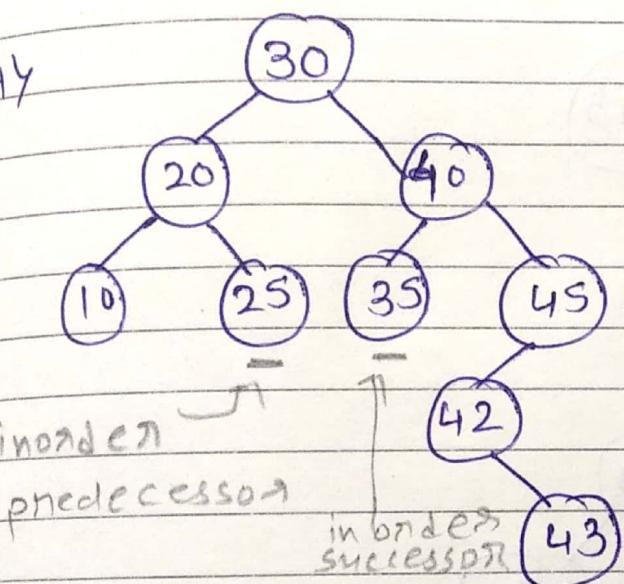

MONDAY
MAY 2020

04

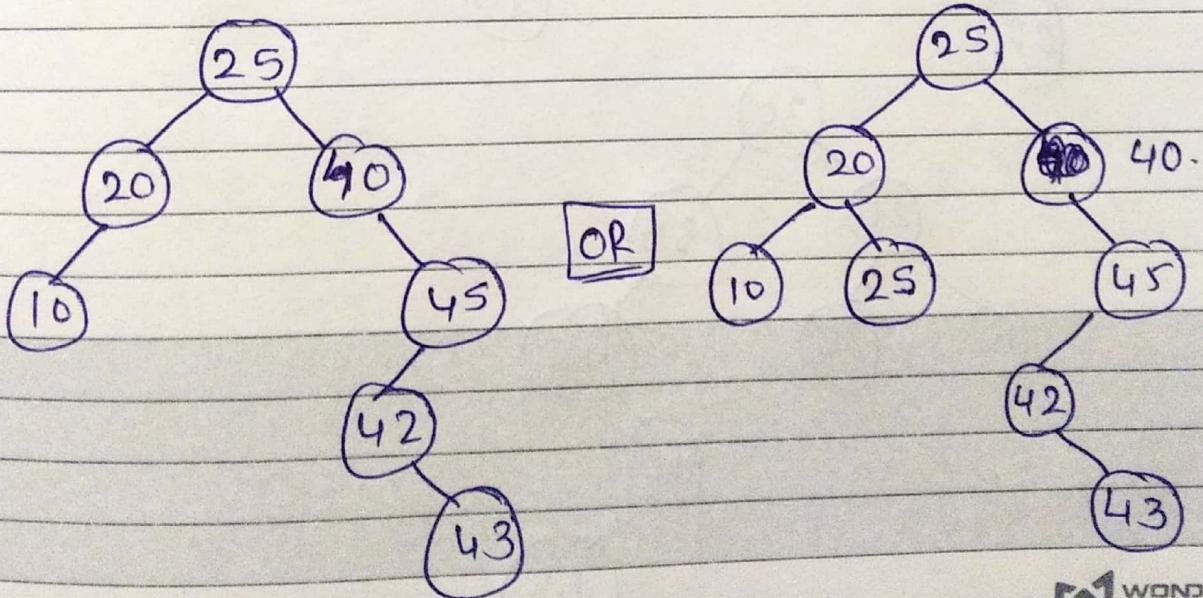

delete (91) :

just promote
it when it
has only one child.

→ when we want to delete a node having more children and levels then it's in-order predecessor or it's in-order successor will take place of deleted node.

delete (30) :-

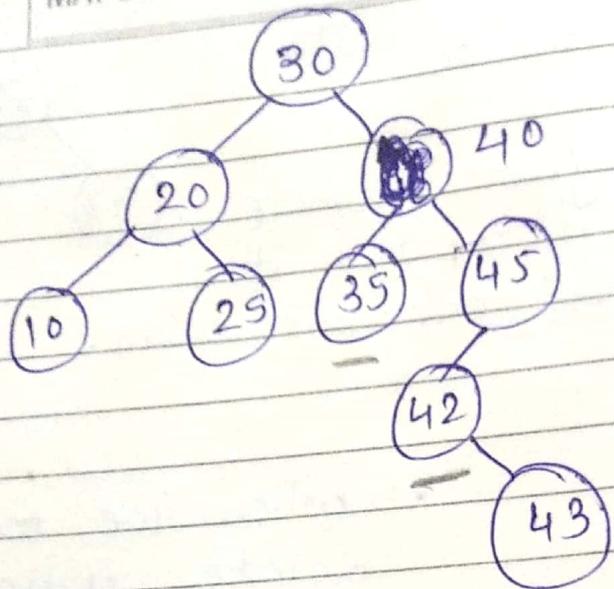

05

TUESDAY

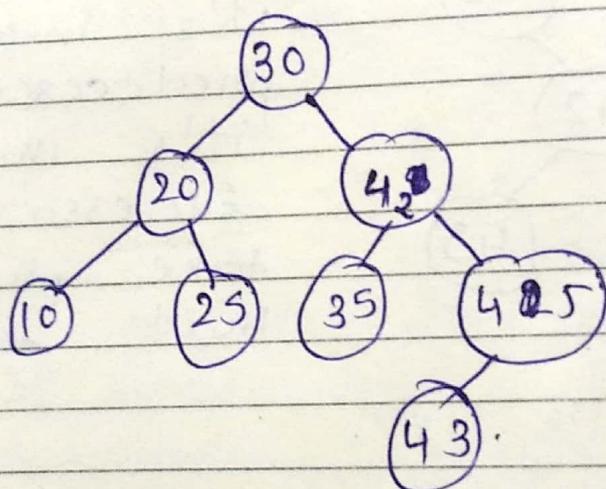

MAY 2020

M	1 2 3 4 5 6 7 8 9
A	10 11 12 13 14 15 16 17 18
	19 20 21 22 23 24 25 26
Y	27 28 29 30 31

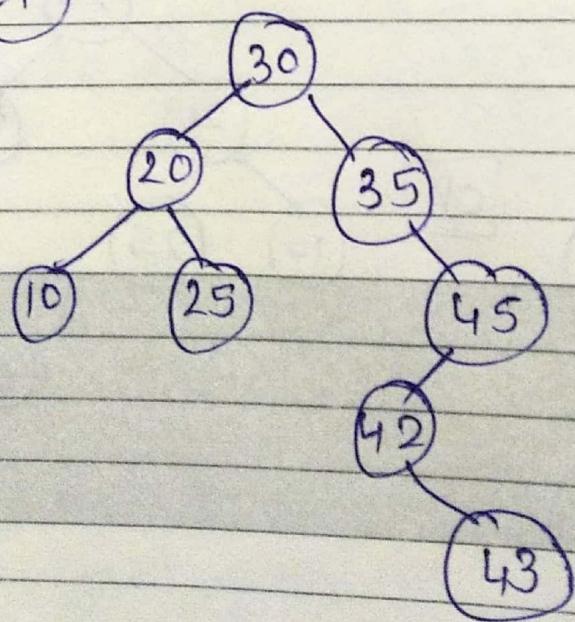

5.

delete (40) :-

OR

2020

	1	2	3	4	5	6	7	8	9	10
M	11	12	13	14	15	16	17	18	19	20
A	21	22	23	24	25	26	27	28	29	30
Y	31									

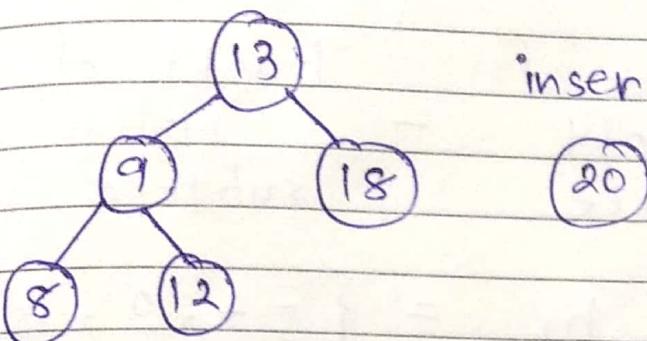

WEDNESDAY

MAY 2020

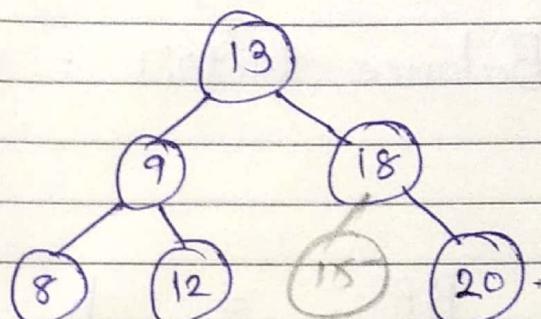

06

* Inserting in a binary search tree :-

14.

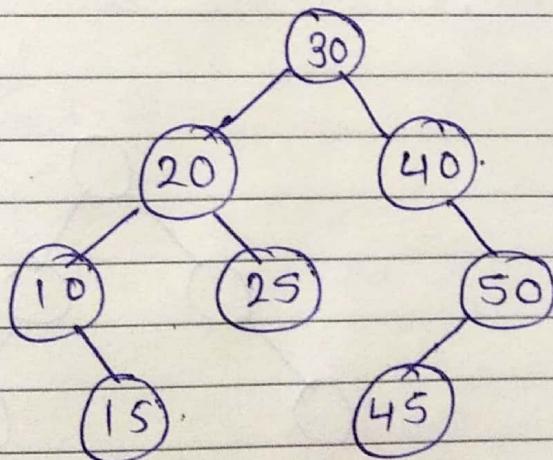

insert :-

That's it !

* Generating BST :-

14 prie : [30, 20, 10, 15, 25, 25, 40, 50, 45]
 in : 10, 15, 20, 25, 30, 40, 45, 50.

07

THURSDAY

MAY 2020

M	1	2	3	4	5	6	7	8	9	10
A	11	12	13	14	15	16	17	18	19	20
Y	21	22	23	24	25	26	27	28	29	30

* AVL Tree :-

→ Balance factor = height of left subtree - height of right subtree

$$BF = h_L - h_R = \{-1, 0, 1\}$$

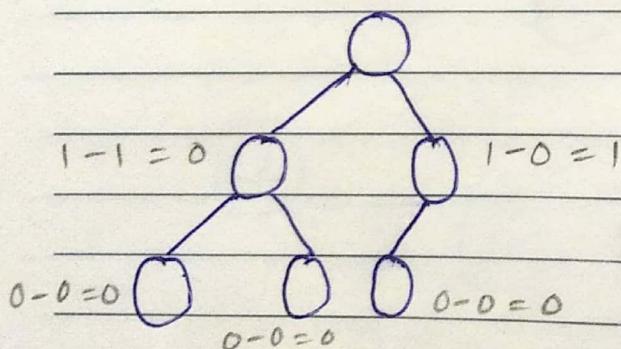

Valid

if $|BF| = |h_L - h_R| \leq 1 \Rightarrow$ Balanced

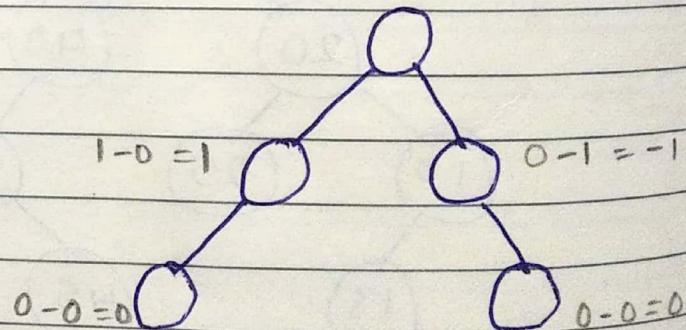

if $|BF| = |h_L - h_R| > 1$ $< -1 \Rightarrow$ imbalanced

→ Examples :- Here we are considering levels instead of height for the convenience.

$$2-2=0$$

$$2-2=0$$

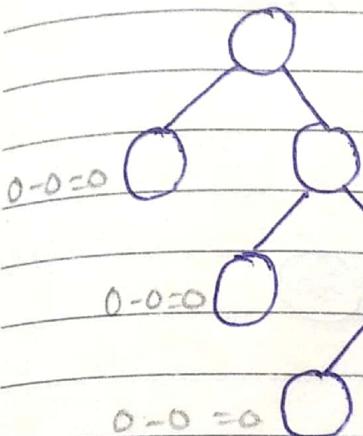

M	1	2	3	4	5	6	7	8	9	10
A	11	12	13	14	15	16	17	18	19	20
Y	21	22	23	24	25	26	27	28	29	30
										31
	M	T	W	T	F	S	S	M	T	W

FRIDAY

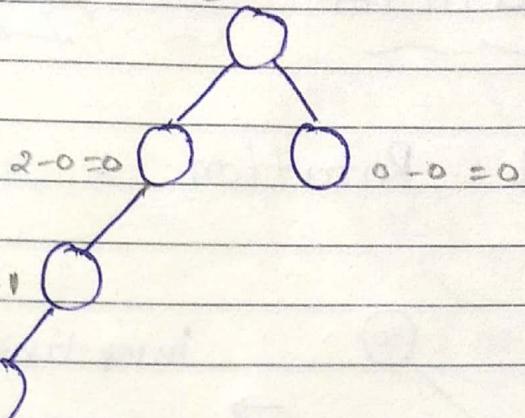

MAY 2020

08

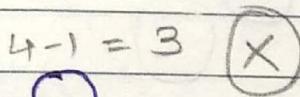

$$1 - 3 = -2$$

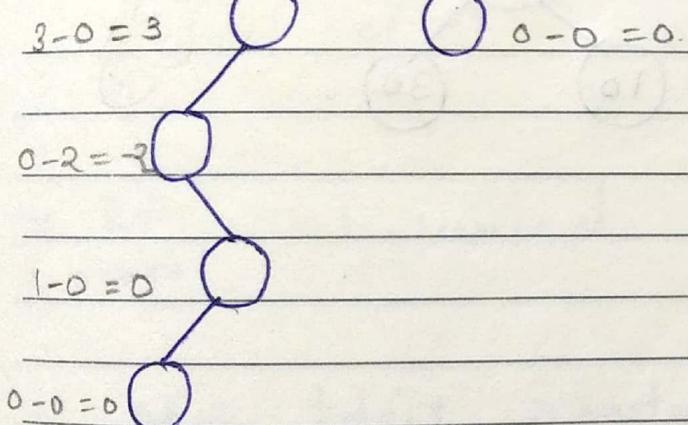

$$3 - 1 = 2$$

$$4 - 1 = 3$$

→ Never get balance factor as 3.

09

SATURDAY

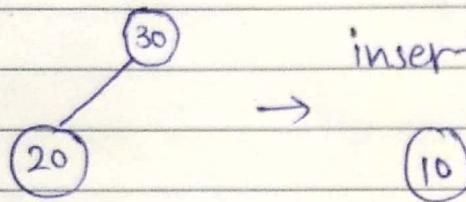

MAY 2020

M	1	2	3	4	5	6	7	8	9	10
A	11	12	13	14	15	16	17	18	19	20
Y	21	22	23	24	25	26	27	28	29	30

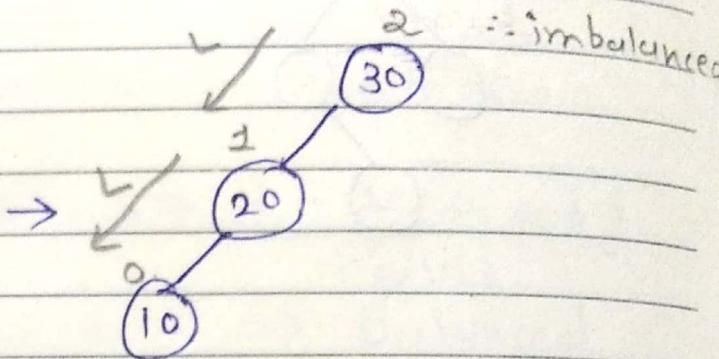

* Rotations for balance factor :-

Insertion :-

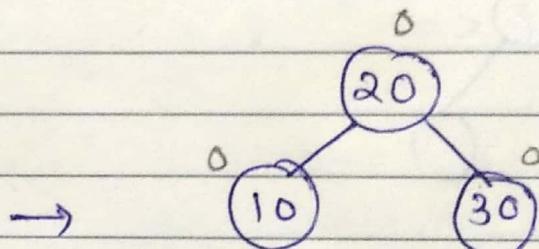

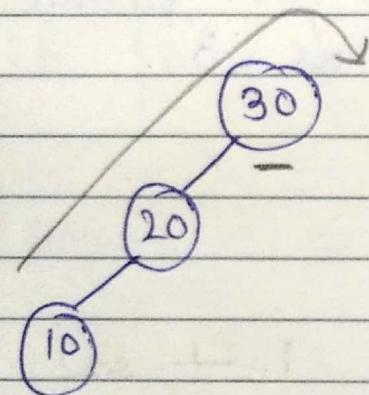

1) LL Rotation :-

inserting

LL
∴ imbalanced

∴ balanced

→ LL imbalanced \Rightarrow Rotate right side

10 SUNDAY

2020

1 2 3 4 5 6 7 8 9 10

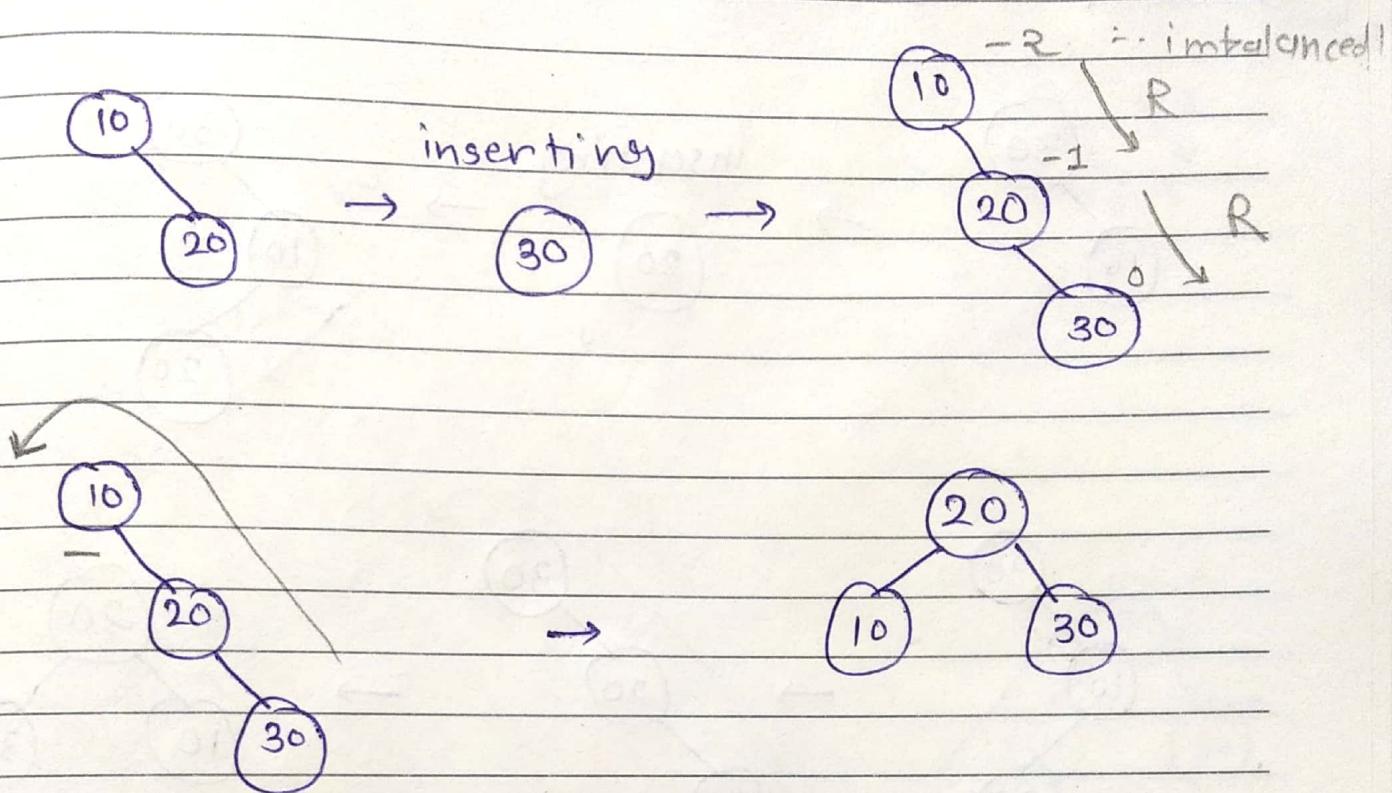

M 11 12 13 14 15 16 17 18 19 20 21 22 23 24
A 25 26 27 28 29 30 31
Y M T W T F S S M T W T F S S

MONDAY

MAY 2020

11

2) RR Rotation :

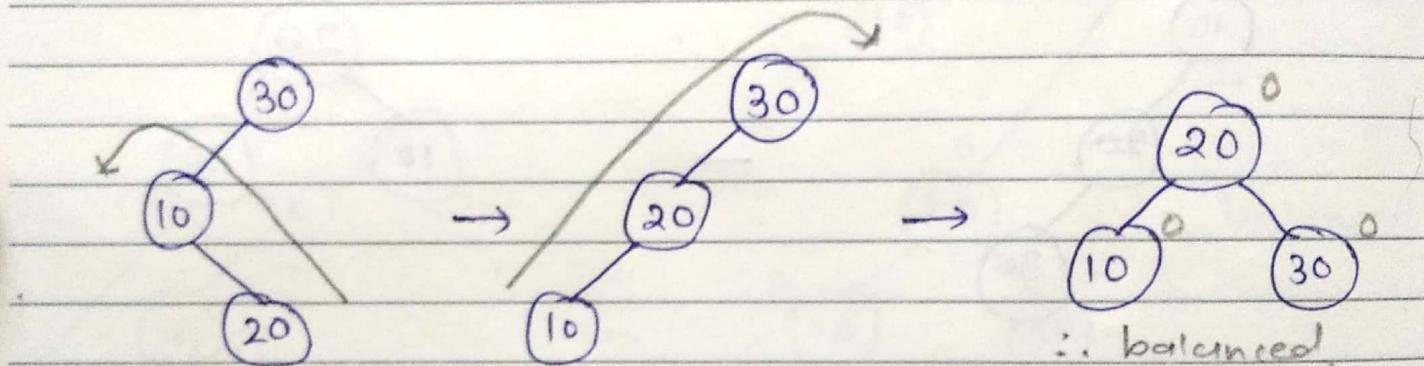

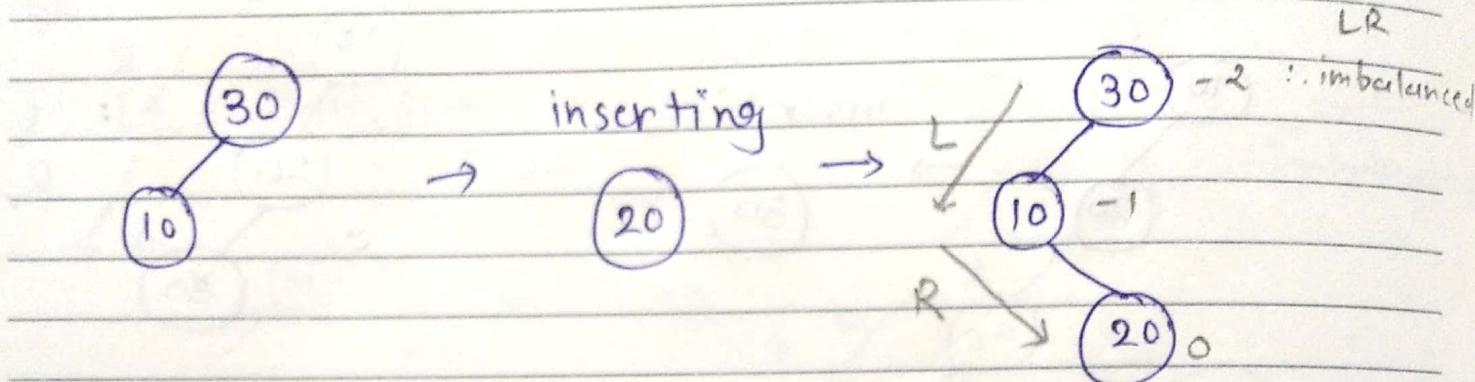

→ RR imbalanced → Rotate left side

12

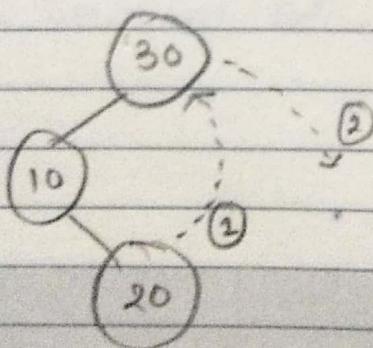

TUESDAY
MAY 2020

M	1	2	3	4	5	6	7	8	9	10
A	11	12	13	14	15	16	17	18	19	20
Y	21	22	23	24	25	26	27	28	29	30

3) LR Rotation :

rotate two nodes this is LL
to left rotation.

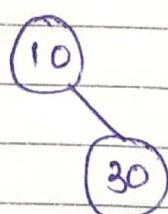

M	1	2	3	4	5	6	7	8	9	10
A	11	12	13	14	15	16	17	18	19	20
Y	21	22	23	24	25	26	27	28	29	30

WEDNESDAY

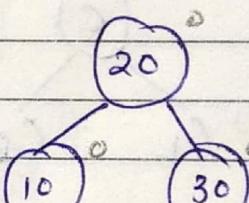

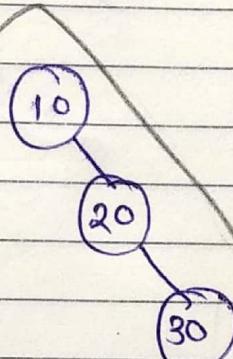

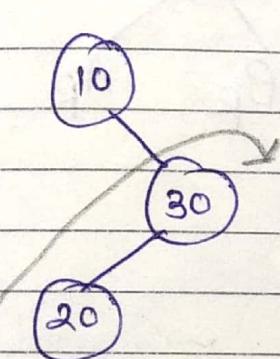

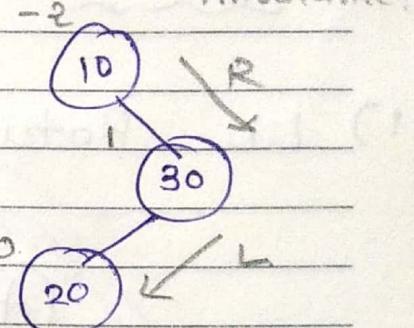

MAY 2020

13

4) RL Rotation :

inserting

∴ balanced

rotate two nodes
to right

this is RR
rotation we
get.

if node has positive balance factor \Rightarrow LL Rotation

14

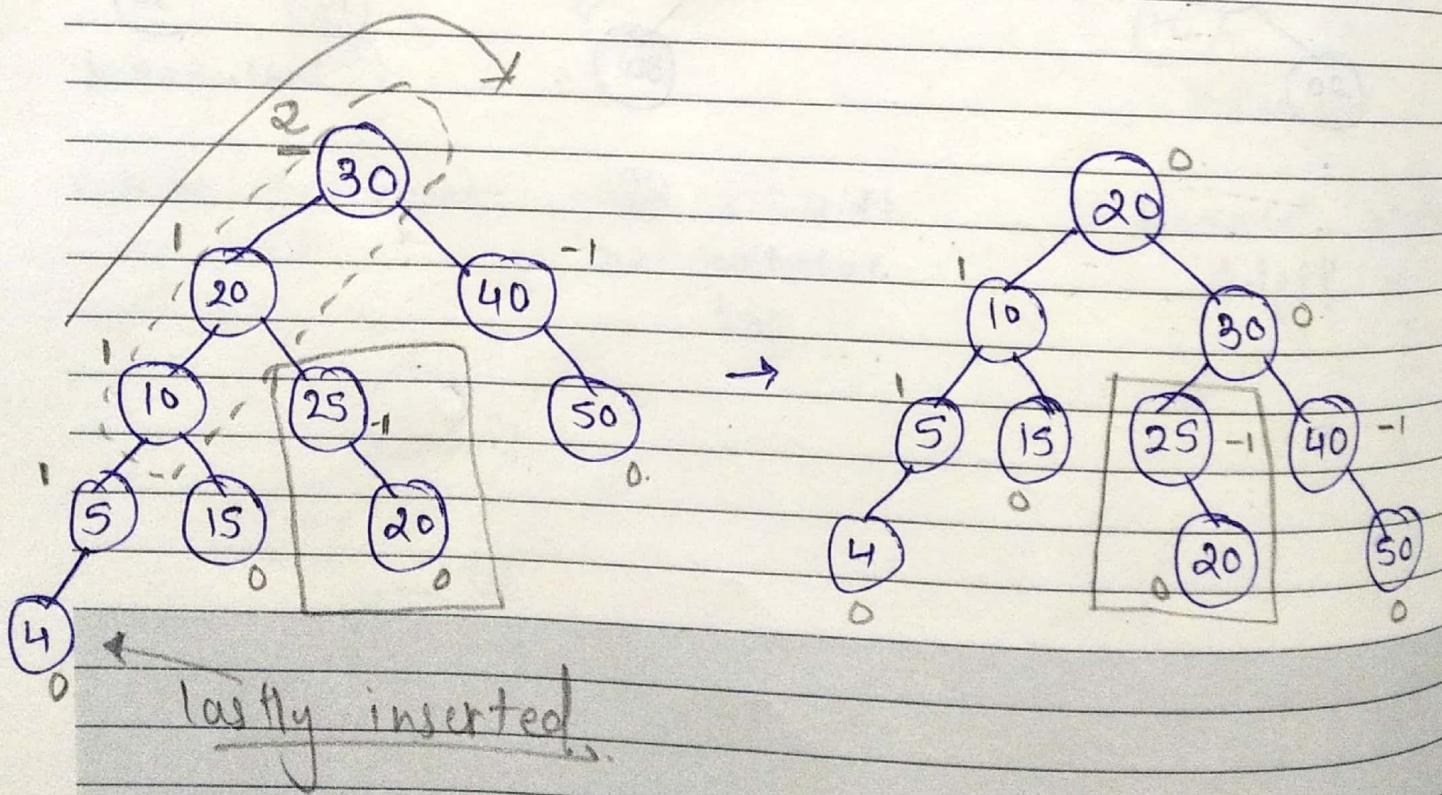

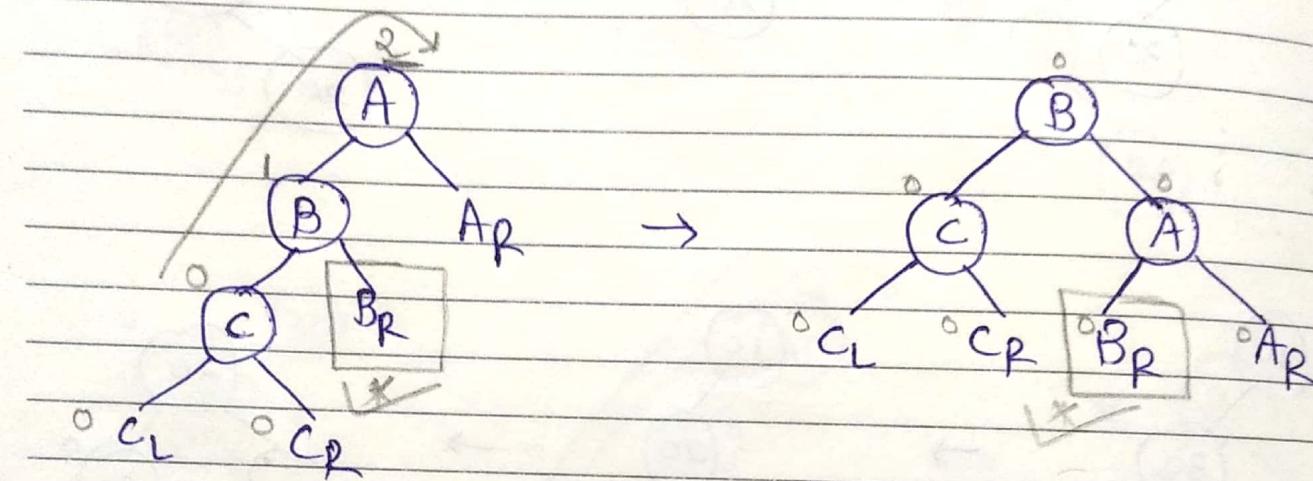

THURSDAY

MAY 2020

M	1	2	3	4	5	6	7	8	9	10
A	11	12	13	14	15	16	17	18	19	20
Y	25	26	27	28	29	30	31	21	22	23

* Formula of Rotations for insertion :-

1) LL Rotation :-

if node has negative balance factor \Rightarrow RR Rotation

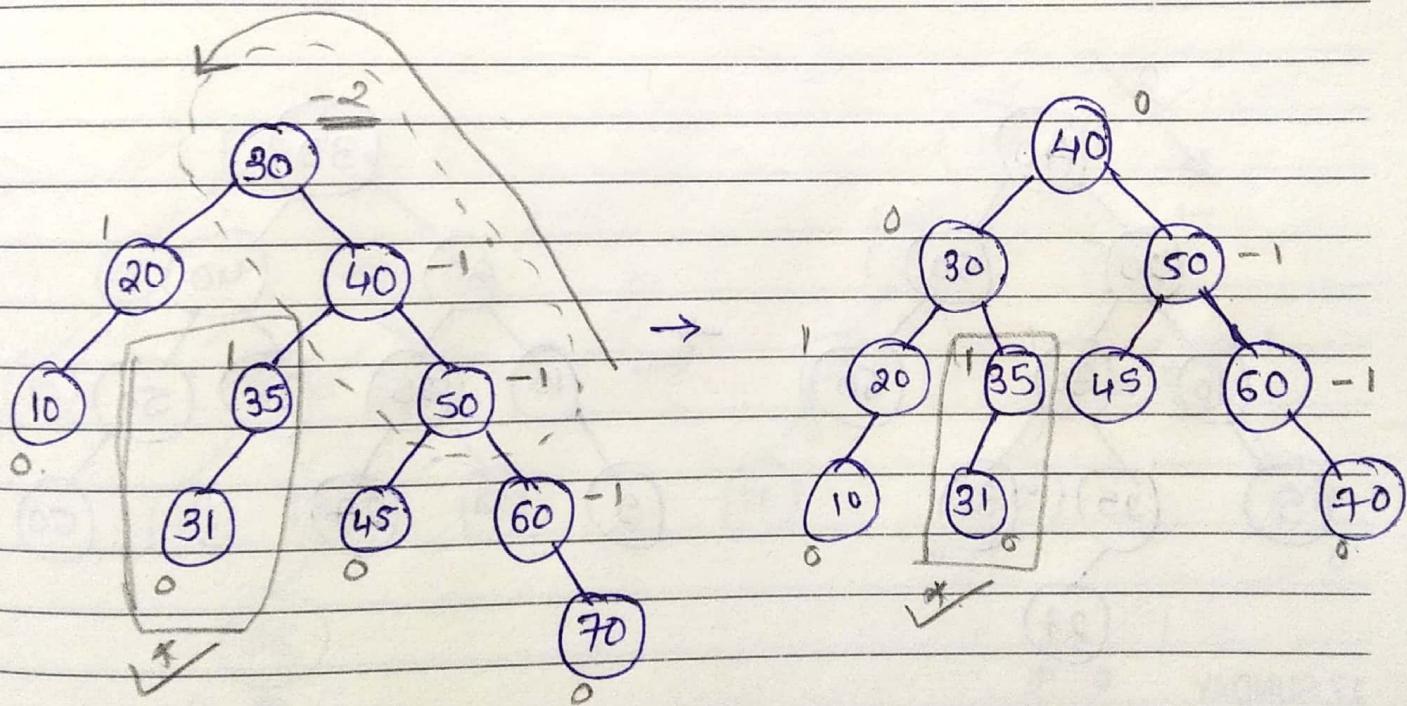

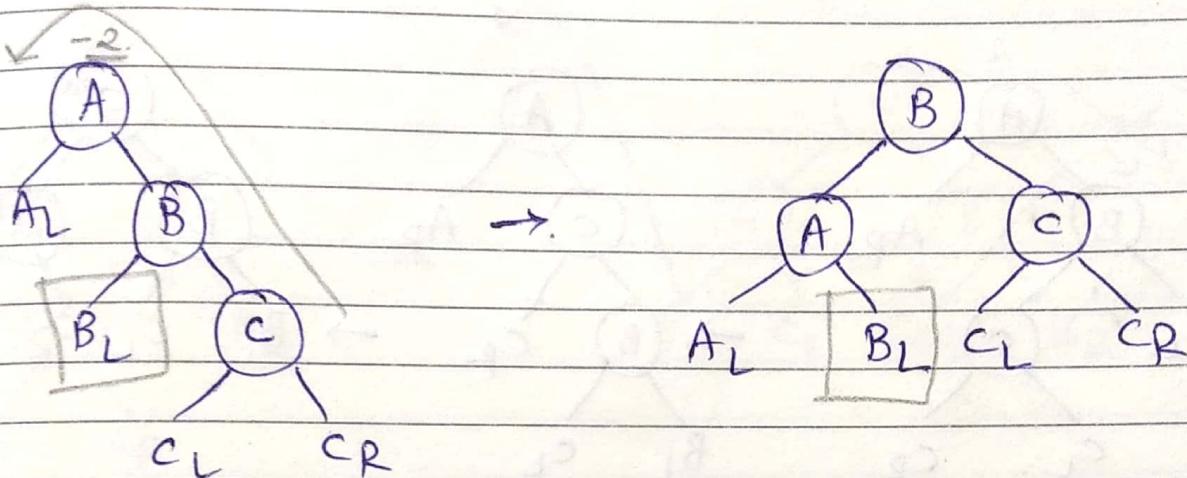

M	1	2	3	4	5	6	7	8	9	10
A	11	12	13	14	15	16	17	18	19	20
Y	21	22	23	24	25	26	27	28	29	30

FRIDAY

15

MAY 2020

23 RR Rotation :-

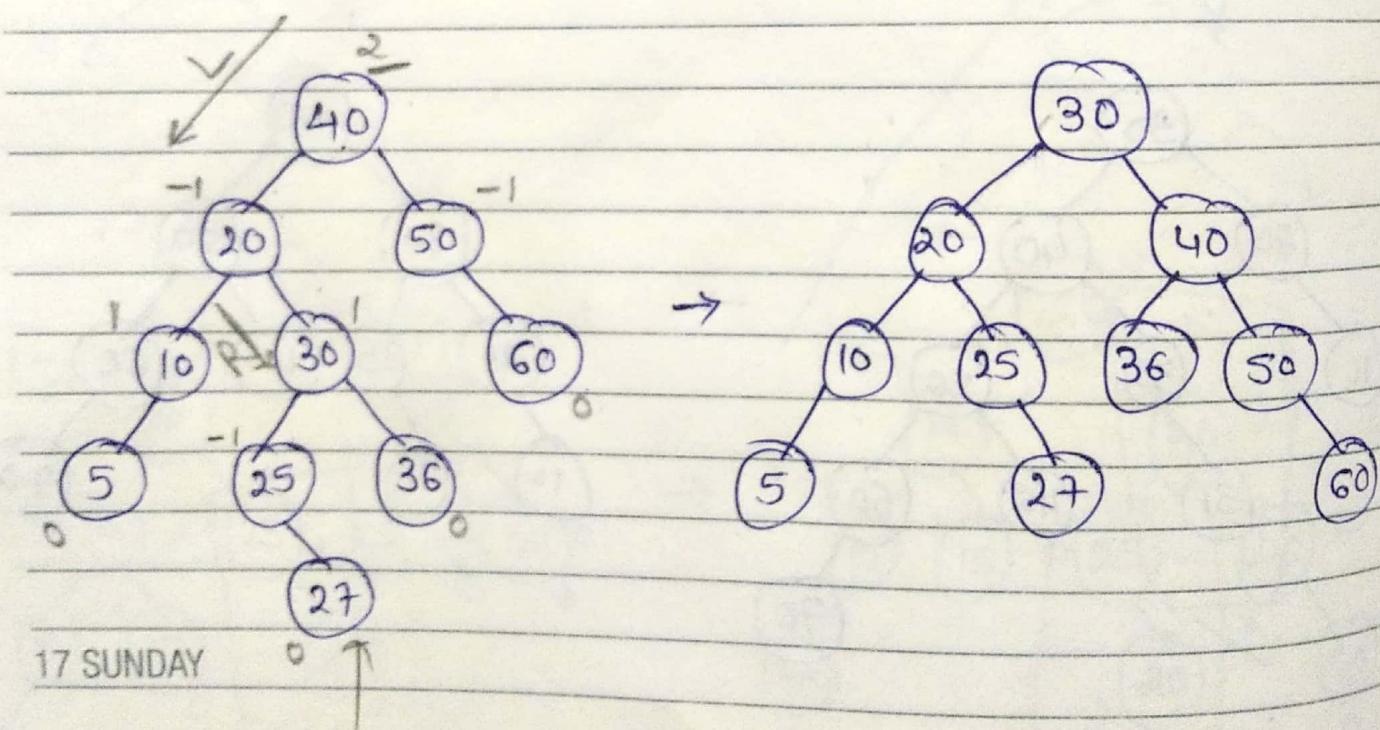

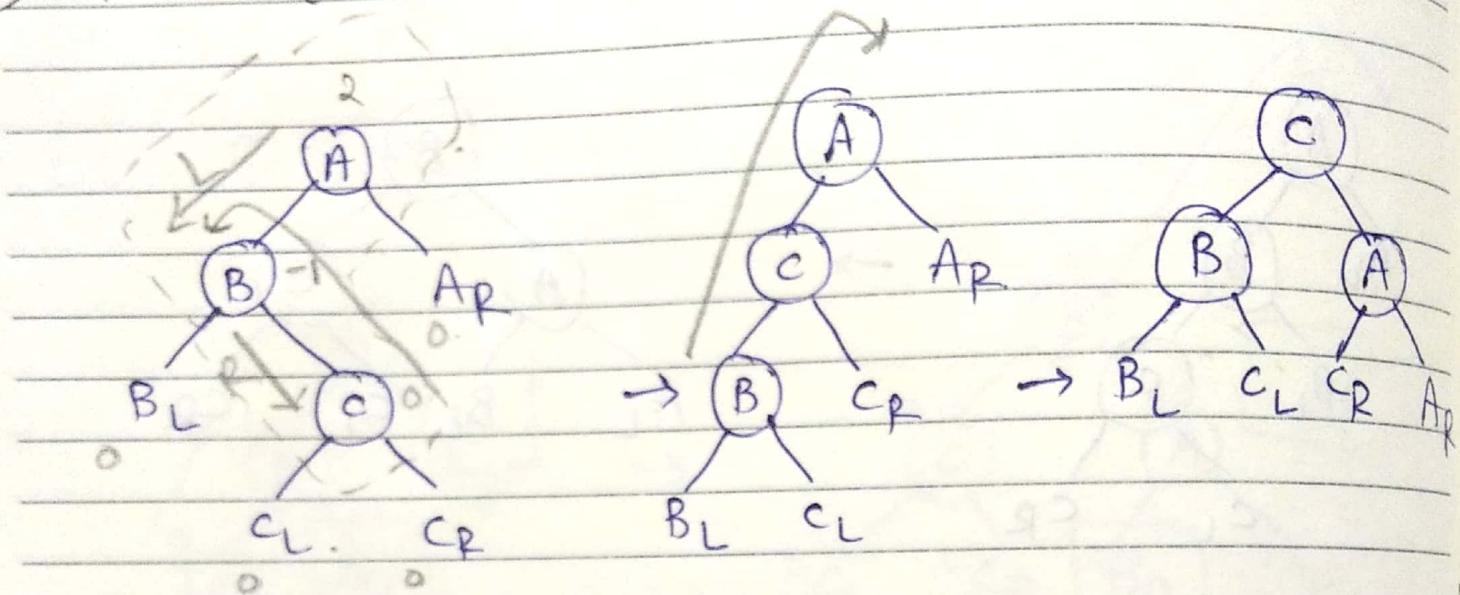

16

SATURDAY

MAY 2020

M	1	2	3	4	5	6	7	8	9	10
A	11	12	13	14	15	16	17	18	19	20
Y	21	22	23	24	25	26	27	28	29	30

3) LR Rotation :

17 SUNDAY

lastly inserted.

Left → Right.

2020

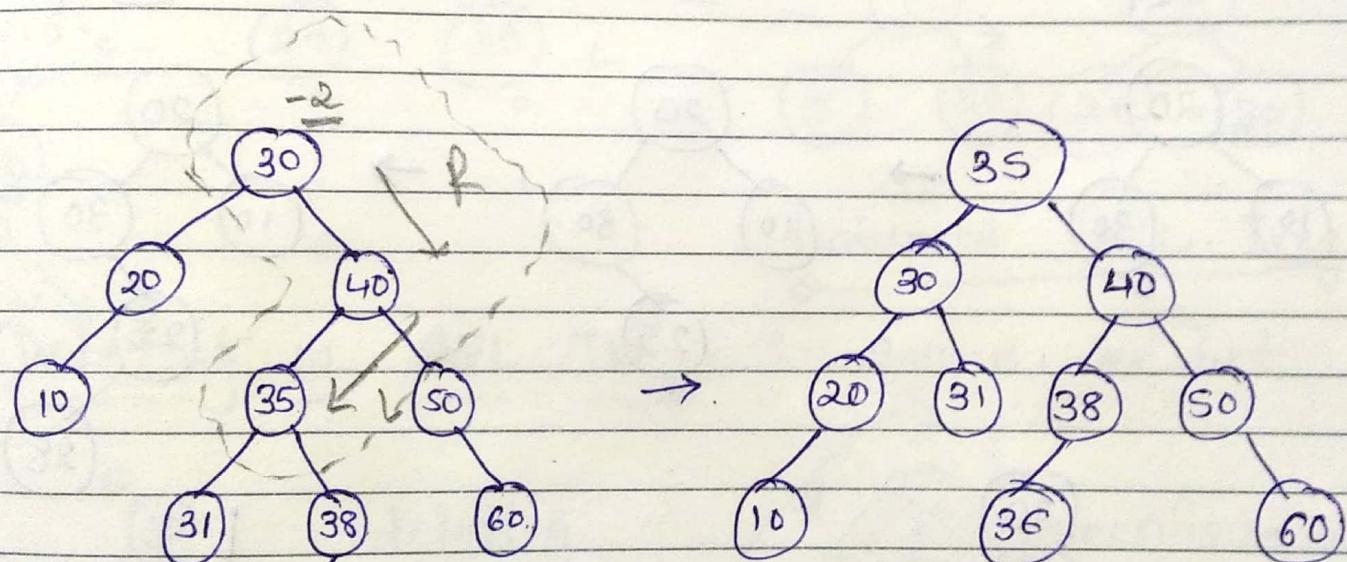

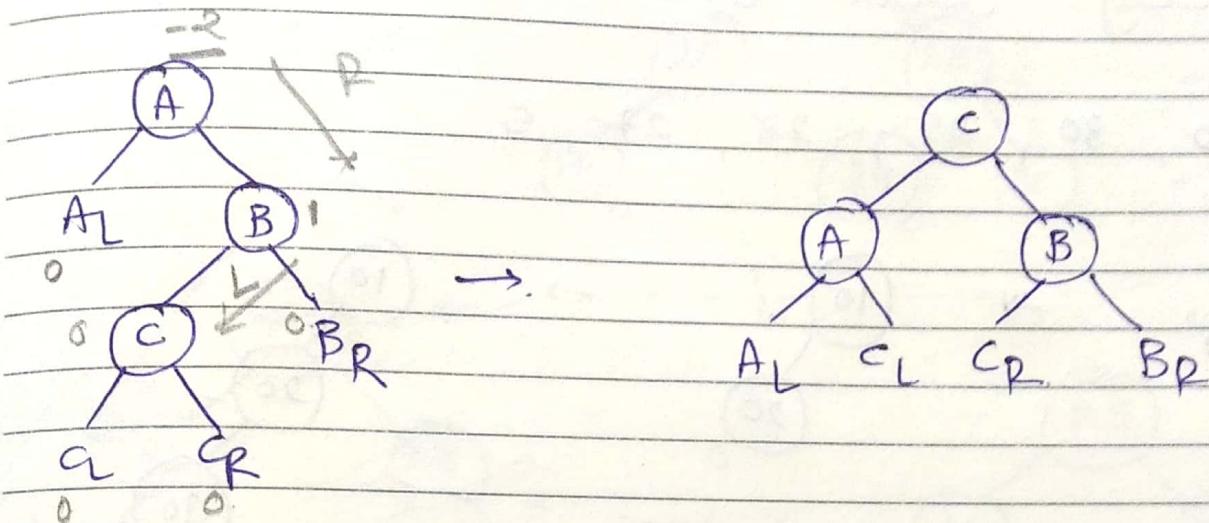

M	1	2	3	4	5	6	7	8	9	10
A	11	12	13	14	15	16	17	18	19	20
Y	21	22	23	24	25	26	27	28	29	30

MONDAY

MAY 2020

18

4) RL Rotation :

lastly
inserted.

2020

19

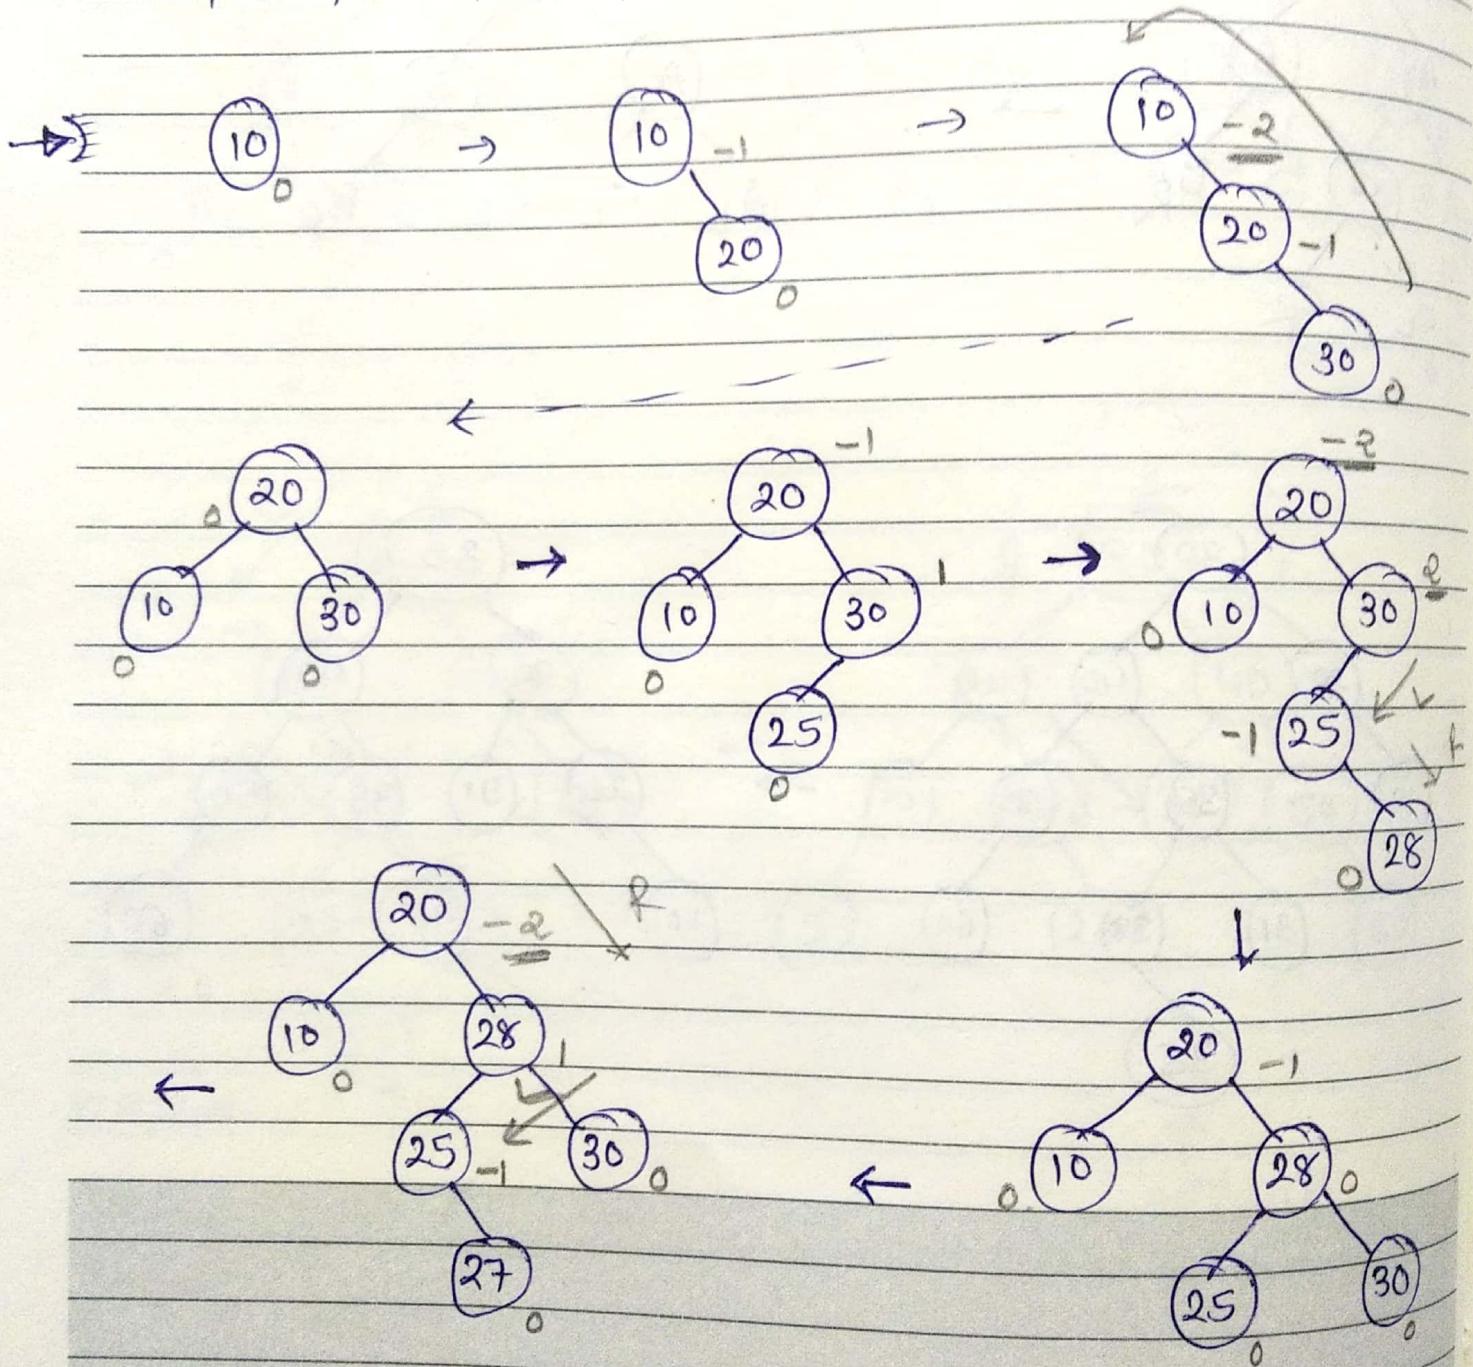

TUESDAY

MAY 2020

M	1	2	3	4	5	6	7	8	9	10
A	11	12	13	14	15	16	17	18	19	20
Y	21	22	23	24	25	26	27	28	29	30

* Creating AVL tree :-

→ 10, 20, 30, 25, 28, 27, 5

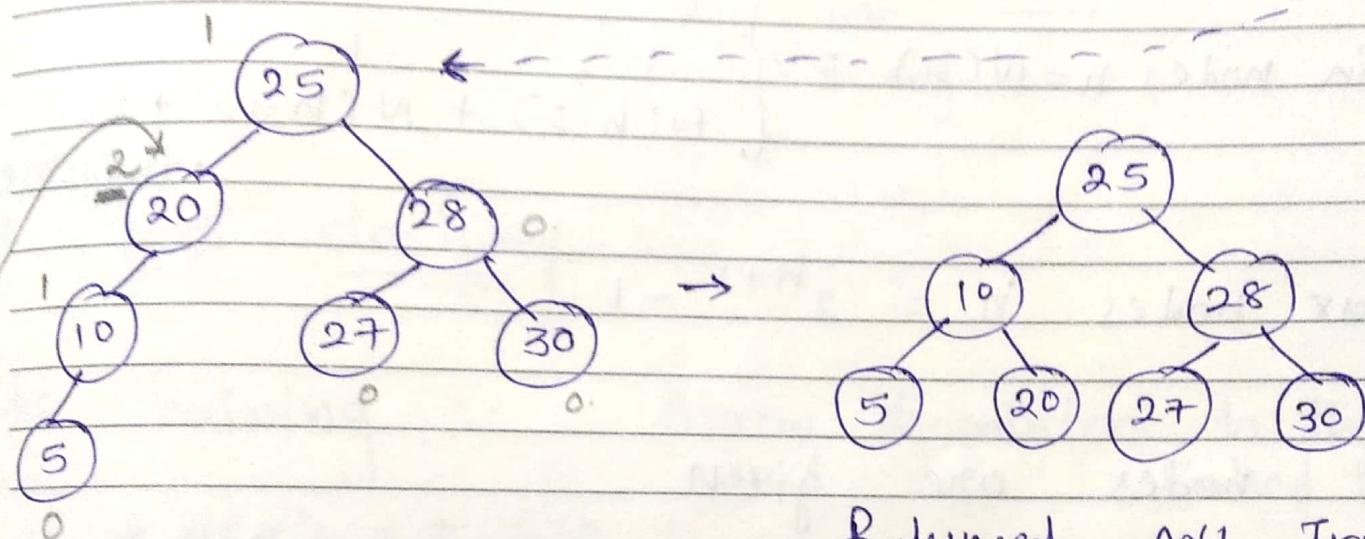

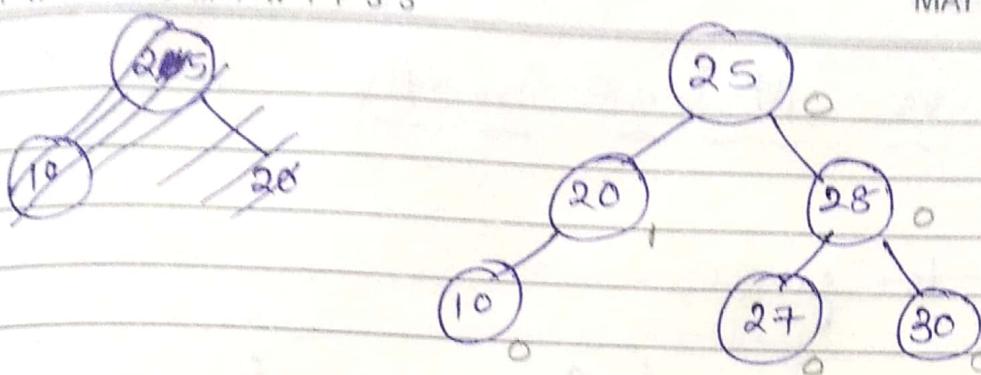

1 2 3 4 5 6 7 8 9 10
 11 12 13 14 15 16 17 18 19 20 21 22 23 24
 25 26 27 28 29 30 31

M	Y	MTWTFSS	SMTWTFSS
---	---	---------	----------

WEDNESDAY

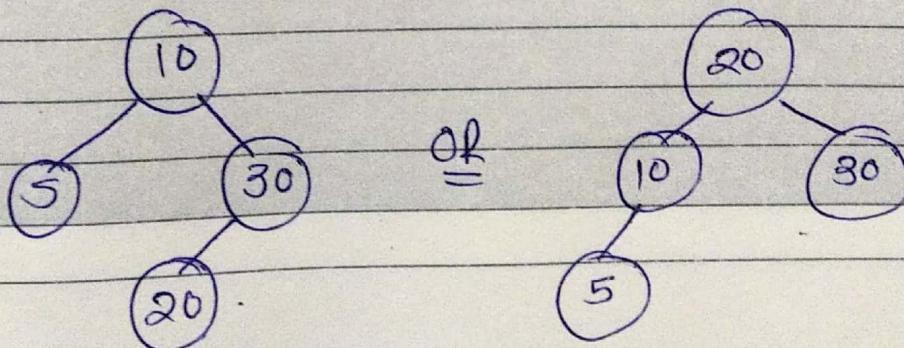

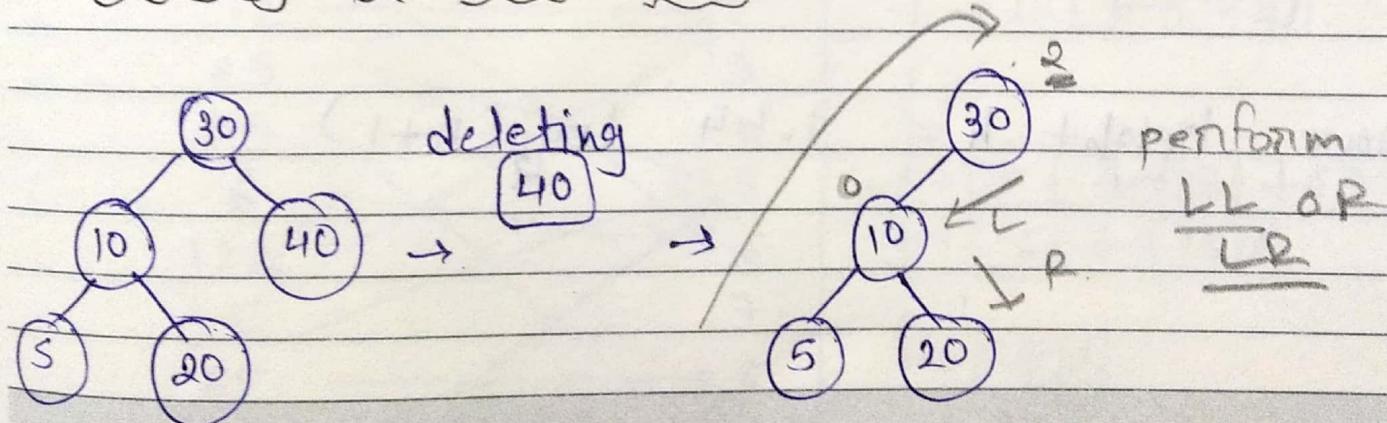

MAY 2020

20

Balanced AVL Tree

* Deleting in AVL Tree :- same as in bst

2020

WONDER CEMENT
EX. PERFECT SHURUAT
